%fam_two_workers	% of families with two or more workers
%work_in_Pitt	% of employed workers who work within the City of Pittsburgh
%work_out_Pitt	% of employed workers who work outside the City of Pittsburgh

Data notes:

1. Because the Census is conducted in two parts, a complete and a sample survey, it is possible to find two numbers, which should logically be the same, but which are slightly different. Also, due to the effects of rounding, percentages may not always add to exactly 100%.
2. No attempt was made to carry the accuracy of reported percentages beyond two decimal places (.01); therefore segments of the population making up less than 0.5% were generally reported as 0%.
3. The percentage of workers who work in the City of Pittsburgh was determined by dividing the number of workers aged 16+, not the number of workers who reported their place of work.
4. Due to the greater sampling error associated with Place of Work data, in some areas the number of workers reported working outside the City of Pittsburgh was greater than the total number of workers reported.
